

Fabrizio Pastore - Scientific Curriculum

Personal information

Name: Fabrizio
Surname: Pastore
Phone: +39 02 6448 7886
Office: University of Milano - Bicocca, Department of Informatics Systems and Communications (DISCo), viale Sarca 336, building U14, 20126 Milano, Italy
E-mail: pastore@disco.unimib.it
Spoken languages: Italian (mother tongue), English
Web site: www.fabriziopastore.com
Member of: IEEE, IEEE Computer Society, ACM, ACM SIGSOFT

Current position

Post-doc at University of Milano - Bicocca, from January 1st, 2011

University positions

Post-doc. Research fellow for UE IP project RESERVOIR, University of Lugano, from January 1st 2010 to December 31 2010.

Research fellow, University of Milano – Bicocca, November 1st to December 31st 2009.

Ph.D. student, University of Milano - Bicocca, from November 1st, 2006 to November 1st, 2009

European Projects

Fabrizio worked on the following European Projects:

UE STREP PINCETTE, from January 1st, 2011. University of Milano - Bicocca.

UE IP RESERVOIR, from January 1st, 2010 to December 31st, 2010. University of Lugano, Switzerland.

UE STREP SHADOWS, from November 1st, 2006 to September 3rd, 2009.
University of Milano - Bicocca

Grants

Research grant at University of Milano - Bicocca. From January 1st, 2011 to December 31st, 2012.

Education

February 2010. Ph.D. in Informatics University of Milano - Bicocca, Piazza dell'Ateneo Nuovo, 1, C.A.P. 20126, Milano. Thesis title: *Automatic Diagnosis of Software Functional Faults by Means of Inferred Behavioral Models*. Advisors: Prof. Mauro Pezzè, Dr. Leonardo Mariani.

December 2008. Professional Engineer Qualification. University of Milano - Bicocca, Piazza dell'Ateneo Nuovo, 1, C.A.P. 20126, Milano.

October 2006. Master Degree in Computer Science. University of Milano - Bicocca, Piazza dell'Ateneo Nuovo, 1, C.A.P. 20126, Milano. 110/110 cum Laude. Thesis title: *Verifica Sperimentale di Tecniche di Analisi Dinamica del Software (Experimental Verification of Dynamic Analysis Techniques)*. Advisor: Prof. Mauro Pezzè. Co-advisor: Dr. Leonardo Mariani.

October 2004. Bachelor Degree in Computer Science. Università degli Studi del Piemonte Orientale, viale Teresa Michel, 11, C.A.P. 15121, Alessandria. 110/110 cum laude. Thesis title: *ThunderDB: progettazione e sviluppo di un RDBMS open source (ThunderDB: design and development of an open source RDBMS)*. Advisor: Dr. Stefania Montani

Research activity

My research regards Software Engineering: Dynamic Program Analysis [SOQUA2007, ISSRE2008, ISSTA2009, ICSE2009, CAI2010, PHD2010, CRC2011, TSE2011, ISSRE2012], Software Testing [ICSM2010, ICST2012], Software Automation [TOPI2011, ICSETD2012, ICACTD2011].

Dynamic Program Analysis

My contributions to the state of the art of Dynamic Program Analysis regards the development of five different dynamic program analysis techniques that can be combined together to help software developers in the debugging of software faults: KLFA, BCT, AVA, and RADAR.

KLFA is a technique that captures and generalizes in a same model both data flow and control flow information. KLFA has been successfully adopted to support debugging through the analysis of log files. I presented the results obtained with KLFA at the 2008 International Symposium on Software Reliability Engineering (ISSRE), and in the book "Mining Software Specifications: Methodologies and Applications (CRC Press in 2011)".

BCT is a dynamic analysis technique that identifies anomalies in both data values and events flow. I extended BCT by introducing means to filter false positives and build anomaly graphs, graphs that capture the correlation between different runtime anomalies thus simplifying the diagnosis of faults. The results obtained with BCT have been presented in an article appeared in the August 2011 issue of the IEEE Transactions on Software Engineering, while I demoed the BCT Eclipse plug-in at the 2009 International Conference on Software Engineering (ICSE).

AVA is a technique that generates human readable interpretations of events flow anomalies. I presented the results obtained with AVA at the 2009 International Symposium on Software Testing and Analysis (ISSTA), and I demonstrated the analysis of log files with AVA at the formal tool demo session of the 2013 International Conference on Software Testing Verification and Validation (ICST).

RADAR is a technique for the debugging of regression faults. RADAR derives models from passing executions of a base software version, and use these models to identify anomalies in the failing executions of the upgraded version of the software. The anomalies identified by RADAR are shown to software developers to help them in the debugging of regression faults. RADAR has been successfully applied to both open source and industrial case studies. I presented the obtained results at ISSRE 2012, and I demoed the tool that implements RADAR at the formal demo session of ICSE 2013.

Test cases evolution and generation

Along with Mehdi Mirzaaghaei, I worked on the definition of a framework, TestCareAssistant, that supports software developers in the activities related to test suite evolution: repairing test cases broken by method refactorings, and generating test cases for new functionalities. The results obtained with TestCareAssistant have been published in a short paper at the 2010 International Conference on Software Maintenance, and at ICST 2012.

More recently I worked with Gordon Fraser and Leonardo Mariani on the adoption of Crowd Sourcing platforms like Amazon Mechanical Turk as an effective mean to derive oracles for automatically generated test cases. I presented the obtained results at ICST 2013.

Software Automation

I recently defined the concept of task-based plug-ins as a new mean to allow end-users in designing workflow of application functionalities. This research result has been presented in an article appeared on the journal "Software Practice and Experience" published by Wiley in 2012, furthermore I presented MASH, the tool that integrates task-based plug-ins in Eclipse, at the formal demo session of ICSE 2012.

Within the context of the EU IP project RESERVOIR I worked on the definition of an autonomic controller that manages the auto-scaling capabilities of a Cloud computing platform, which was presented at the demo session of the 2011 International Conference on Autonomic Computing.

Software development/consulting

I maintain, with the contribution of different students, five tools: MASH, BCT, RADAR, AVA, KLFA. All the tools are built as Eclipse plug-ins.

MASH is a framework that enables runtime composition of plug-in functionalities. MASH has been presented at the Formal Tool Demo Session of the 34th International Conference on Software Engineering (ICSE'12), Zurich, Switzerland, June 2012. MASH has been detailed in different papers [TOPI2011], [ICSETD2012]. Web site: <http://www.lta.disco.unimib.it/tools/mash/>

BCT (Behavior Capture and Test) is a dynamic analysis tool to support software developers in debugging software faults. BCT has been presented at the Formal Tool Demo Session of the 31st International Conference on Software Engineering (ICSE'09), Vancouver, CA, May 2009. BCT has been detailed in different research papers [ICSETD2009], [CAI2010], [TSE2011]. BCT has been adopted in two EU projects: SHADOWS and PINCETTE. Web site: <http://www.lta.disco.unimib.it/tools/bct/>

RADAR is a dynamic analysis tool built upon BCT that leverages program diffing and dynamic analysis to identify and present the anomalous software behaviors that cause a regression failure. RADAR has been presented at Eclipse-IT 2012 [ECLIPSE2012] and will be presented at ISSRE 2012 [ISSRE2012].

AVA (Automata Violations Analyzer) is a tool that provides human readable interpretations of finite state automata violations. AVA has been described in different research papers [ISSTA2009], [CRC2011]. Web site: <http://www.lta.disco.unimib.it/tools/ava/>

KLFA is a tool that identifies anomalous behaviors in log files. KLFA has been described in different research papers [SOQUA2007], [ISSRE2008]. Web site: <http://www.lta.disco.unimib.it/tools/klfa/>

In 2011 and 2012 I did consulting as Software Quality expert for a C/C++ automotive company.

Fabrizio's teaching experience include courses on well known web technologies and Unix utilities: Java EE, Xml based tools, REST tools, Unix Shells.

Teaching

Teaching Assistant for “Fondamenti di Informatica” (Foundations of Informatics) Dipartimento di Elettronica, Informazione e Bioingegneria. Politecnico di Milano. 2013/2014 (Frontal lessons 40 hours). Instructors: Cristiana Bolchini.

Teaching Assistant for “Ingegneria del Software” (Software Engineering) Department of Informatics Systems and COmmunications, University of Milano – Bicocca. 2011/2012 (Laboratory 24 hours). Instructors: Leonardo Mariani, Francesca Arcelli.

Teaching Assistant for “Gestione di Documenti in Ambiente Web” (Document Management on the Web) Department of Informatics Systems and COmmunications, University of Milano – Bicocca. 2011/2012 (Frontal lessons 12 hours). Instructor: Hue Le Van.

Teaching Assistant for “Laboratorio di Sistemi Operativi e Reti” (Operating Systems and Networking Lab.) Department of Informatics Systems and COmmunications, University of Milano – Bicocca. 2008/2009 (Frontal lessons 36 ore + Laboratory 24 ore), 2011/2012 (Frontal lessons 24 ore + Laboratory 24 ore). Instructors: Flavio De Paoli, Hue Le Van.

Teaching Assistant for “Laboratorio di Progettazione” (Software Design Lab.). Department of Informatics Systems and COmmunications, University of Milano – Bicocca. 2007/2008 (Frontal lessons 12 hours), 2008/2009 (Frontal lessons 12 hours), 2009/2010 (Frontal lessons 12 hours). Instructor: Leonardo Mariani.

Teaching Assistant for “Laboratorio di Informatica per Fisici” (Informatics for Physician Lab.). Department of Physics, University of Milano – Bicocca. 2006/2007 (Laboratory 40 hours), 2007/2008 (Laboratory 30 hours), 2008/2009 (Laboratory 24 hours). Instructor: Luca Bernardinello.

Theses supervising

Ph.D. Thesis

Mehdi Mirzaghahi. Automatically Evolving Test Suites. Ph.D. Thesis. Advisor: Prof. Mauro Pezzè. Co-advisor: Dr. Fabrizio Pastore. University of Lugano. Lugano. 2012

Master Theses

Luciano Poto. End - User Programming in applicazioni RCP: sviluppo di una soluzione basata sui workflow (End User Programming with RCP applications: a workflow based solution). Master Thesis. Supervisors: Dr. Leonardo Mariani, Dr. Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). March 2012.

Anton Babenko. Diagnosi di difetti attraverso system logs. Master Thesis. Supervisors: Dr. Leonardo Mariani, Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). April 2009.

Mirko Granata. Correzione automatizzata di difetti di regressione. Master Thesis.

Supervisors: Dr. Leonardo Mariani, Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). April 2009.

Bachelor Theses

Matteo Brunetto. Sviluppo di uno Strumento di Crowd Mutation Testing. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Dr. Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). October 2012.

Andrea Di Cosmo. Sviluppo di un plug-in Eclipse per la localizzazione di difetti. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Dr. Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). February 2012.

Davide Ramaglietta. Sviluppo di un plug-in Eclipse per il Crowdttesting. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Dr. Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). November 2011.

Anida Zgura. Valutazione Empirica della Tecnica di Analisi Dinamica AVA. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Dr. Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). June 2011.

Alessia Ferrari. Analisi empirica di una tecnica per l'interpretazione dei fallimenti delle applicazioni orientate agli oggetti. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Dr. Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). April 2011.

Silvia Traversi. Modellazione di una tecnica per l'identificazione di anomalie nei file log. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Dr. Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). November 2010.

Covelli Marco. Ottimizzazione di una tecnica per la prevenzione di problemi di concorrenza. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Dr. Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). April 2010.

Alberto Goffi. Definizione di un'interfaccia grafica per la visualizzazione e l'analisi dei dati prodotti dalla tecnologia BCT. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). July 2009.

Andrea Mattavelli. Sviluppo di una tecnica di healing per problemi di concorrenza. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). December 2009.

Valerio Terragni. Sviluppo di un ambiente visuale per il controllo della tecnica di analisi dinamica BCT. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). October 2008.

Antonio Toscano. Sperimentazione di tecniche per il test di regressione in assenza di codice sorgente. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). February 2008.

Francesco Columella. Progettazione e sviluppo di un framework per il controllo della tecnologia BCT. Bachelor Thesis. Supervisors: Dr. Leonardo Mariani, Fabrizio Pastore. University of Milano-Bicocca, Department of Informatics Systems and Communication (DISCo). December 2007.

Presentations

RADAR: A Tool for Debugging Regression Problems in C/C++ Software. 35th International Conference on Software Engineering (ICSE'13). Formal Tool Demo session. San Francisco, USA. May 2013

CrowdOracles: Can the Crowd Solve the Oracle Problem? 6th IEEE International Conference on Software Testing, Verification and Validation (ICST'13). Luxemburg, LU. March, 2013

AVA: Supporting Debugging With Failure Interpretations. 6th IEEE International Conference on Software Testing, Verification and Validation (ICST'13). Tool Demo. Luxemburg, LU. March, 2013

Static upgrade checking with dynamically generated assertions. 2nd Workshop on Validation Strategies for Software Evolution (VSSE'13), co-located with European Joint Conferences on Theory and Practice of Software (ETAPS). Invited Talk. Rome, Italy. March, 2013.

Dynamic Analysis of Upgrades in C/C++ Software. 23rd IEEE International Symposium on Software Reliability Engineering. Richardson, Dallas, USA. November, 2012.
